

The National Symposium on Environment and Peace

Date: September 21, 2018

Abstract submission deadline: August 24, 2018

Venue: Wangari Maathai Institute, College of Agriculture and Veterinary Sciences, University of Nairobi

Guidelines for Research Application Summary/ Extended Abstract

Extended Abstracts should not exceed four A4 pages (approximately 1,600 words). Use 2,54 cm margins and single line spacing throughout. All text, except the title should be in font face – Times New Roman and font size 12. The title should be in 14 point bold. Follow the Title on the next line by authors' initials and surnames; and provide their respective affiliations (Institution and Postal address), using numerical superscripts to indicate each author's affiliation. E-mail address of the corresponding author on the next line (use "E-mail:" followed by the e-mail address on the same line). The title, authors, affiliation and contact details, as well as e-mail address should be centred.

The extended abstract should be divided into the following sections;

1. Summary

Give a short description of between 250 – 300 words which should provide context to the problem and proposed interventions/ contribution to knowledge that will better livelihoods or advance further research.

Key words

Use a maximum of six keywords, in alphabetical order, separated with commas. Do not include words already in your abstract title.

2. Introduction

The introduction must include: Background and identify the problem to be addressed in the research, review, experience and/ or practice. Clearly state the aim and/ or the hypothesis of the research paper. Be sure that this aim and/ or objective remains the focus for all the sections of your Research Application Summary.

3. Approach/ Materials and Methods/ Methodology

This will vary depending on the type of study and nature of the paper.

- *Empirical quantitative studies*: Clearly state when and where the trial was conducted, especially if it was a laboratory, glass/greenhouse or field trial. Also indicate if it was a one season or multiple season study. State the test crop(s) if applicable; Give a short description of all the treatments; List the parameters that were measured; Give the experimental design and state the number of repetitions; State the level of probability and what test will be used to test for significance between treatment means; Be sure to only give the materials and methods addressing your aim/hypothesis.
- *Empirical social/qualitative studies*: describe the ethnographic approach(es) used, including sampling frame and sample size and provide justification for the methods
- For the other types of papers (e.g., Reviews, Opinion pieces sharing experiences and/ practice): Describe briefly the approach and/ or considerations used to secure the lines of thoughts and perspectives, including a brief description of how the data were analysed (e.g., content / thematic analysis, discourse and network analysis, e.t.c) or the guiding prepositions/theories e.g., Contextual Interaction Theory leading to conclusions such as etic and emic perspectives in anthropology, folkloristics, and the social and behavioural sciences.

4. Results and Discussion

This section should be the focus of your paper. Here you should present and discuss your data. Only discuss significant differences or if not significant (or not statistically analysed yet) give major trends or other

information of importance that the data do imply. Do not introduce data here that are not relevant to your title and your aim. Only one Figure and one Tables are strongly encouraged but more data may be allowed, provided they support completeness of assertions presented.

5. Conclusion

Give one or two general conclusions. Do not make conclusions on data not presented in the results and discussion part. Again make sure that the conclusions address your aim/hypothesis stated in the introduction and that it is linked to you title.

6. Acknowledgement

This should be one or two sentences acknowledging the contribution of persons and institutions that are associated with your publication. It should not include the listed co-authors.

7. References

Use not more than 10 key references.
